TRIED & TESTED

THE BEST MOTORING PRODUCTS, PUT THROUGH THEIR PACES BY EVO INDIA

TVS EUROGRIP ADV TOURING RANGE

₹2,125 to ₹3,675 Duratral EB+

₹2,100 to ₹2,500 Terrabite DB+

₹1,600 to ₹3,250 Beamer

www.tvseurogrip.com

OVER THE LAST DECADE THERE HAS been a huge rise in the popularity of adventure and touring motorcycles in India. Today, there's at least one adv or a cruiser in every mainstream manufacturer's portfolio and as a result, many tyre manufacturers have stepped in to provide solutions and to cater to these segments. Lately, there's been a strong demand for on/off road tyres and that's why TVS Eurogrip has unveiled three new products to cater to them. The brand invited me for a ride from its HQ in Madurai to Thakkady to test how these new tyres perform but before we began we also got

a tour of its manufacturing facility. Tyre making is an extremely technical process that's supervised at every step but let me put it in simple terms: raw materials including rubber are combined together and pressed into a sheet and then molded together on a carcass which is then baked in molds to give it its own tread pattern and voila, that's how a tyre is made. TVS Tyres' new adventure touring tyre range includes the Duratral EB+, a 60/40 on/off road tyre mainly aimed at adventure bikes, the Terrabite DB+, which is made for cruisers and the Beamer range which is aimed at sport commuters.

All these tyres were shod on some popular bikes and those would be our test mules on the way to Thakkady and back. I began the ride on a Suzuki Guei which had a Beamer iC+ at the front (it's a front-only tyre). It has a fairly aggressive tread pattern, for mixed conditions but is the most road-focused of the lot. On a few twisties along the way, the Beamer

supported spirited riding rather well, offering good confidence even on the limit. Even under a few hard braking conditions in the wet, the Beamer never slipped a beat and assisted the bike's anti-lock braking system really well.

I then hopped onto a Royal Enfield Classic 350 shod with the Terrabite DB+ and this tyre really suited the character of this cruiser. It's slightly more aggressive than the Beamer, sporting more grooves to repel stuff like stones and even water. We encountered a few rough patches along the way and that's where this tyre came into its own element providing good grip, even while riding fairly fast on broken, loose roads while providing a good comfort level. Due to its slightly more off-road focused tread pattern it gives the bike an even better ride quality on broken roads. On the highway though, the Terrabite is a little audible because of its aforementioned tread pattern but that's something which isn't a deal breaker because of its balanced performance.

What I was really waiting to test though, was the Duratral EB+, the most aggressive tyre of the lot. So after lunch, I got astride a Royal Enfield Himalayan GT to ride it up Thakkady's gorgeous hill climb. But first, we went slightly off route on an unpaved patch to have some fun. Unlike the other two tyres, the Duratral has aggressive grooves even on its sides which are designed to provide grip when the going gets really tough. As a result, it performs off the road very nicely. Even under strong acceleration and braking it grips, offering little to no drama at all. In fact this tyre can easily be the apt first step if you're looking to learn the ABC of off-road riding. What's also commendable is its performance on smooth roads and because it has a stiff sidewall the tyre felt very stable in the corners.

There's very little differentiating all three of TVS Eurogrip's new adv-touring tyres but each has its own identity and each performs exactly as advertised. Even though I only had a brief time in the saddle to try them out, my initial impressions are surely positive. And as expected TVS has also hit the nail on the head with super competitive pricing across the entire range.

Riding season is upon us, so before leaving I already requested the TVS Eurogrip team to send me a set of the Duratral for long-term testing. I'm really eager to put it through its paces in the long run. Stay tuned! 📺

TREAD TALKS**

WHEN THE GOING GETS ROUGH

We recently had a chance to check out some of the latest adventure-touring tyres from TVS Eurogrip on a run to the hill station of Thekkady

WORDS: CHRISTOPHER CHAVES | PHOTOGRAPHY: MANUFACTURER

As TVS Eurogrip has been producing some awesome tyres of late, and we've mostly had a chance to test them out on track. This time around, things are different, for the better because we're out testing new range of adventure touring tyres: Beamer HS+, Duratrail EB+ and Terrabite DB+. The Beamer HS+ are strictly road-going tyres while the latter two are more in tune with on- and off-road usage.

On this outing, TVS Eurogrip had organised a ride from the factory in Madurai to Thekkady and back, while testing the three different tyres en route. The range of motorcycles equipped with the tyres were the TVS Apache RTR 160 4V along with a few Suzuki Gliders, Yamaha FZs which had the Beamer HS+.

Royal Enfield Classic 350s with the Terrabite DB+ tread on and a couple of Royal Enfield Himalayan 411s with Duratrail EB+ all-terrain running shoes on. So, after a rather elaborate factory tour, we were all suited up and ready to ride out. Sadly, as soon as we started, much to our dismay a majority of the bikes were not in the best of testing conditions. So I turned close to form on the Terrabite DB+ since the Classic 350s appeared to be in the best running order.

The Terrabite DB+ has a pattern of tread that felt good out on the road and gave the Royal Enfield Classic 350s a commendable amount of stability over gravel and loose road surfaces. In a straight line, they felt composed and managed the shifting weight of the RE while braking hard very well. The rear didn't squirm out in a disorderly fashion when I dropped the rear anchor hard while testing how it fares during a locked wheel situation. What impressed me the most about this particular set of tyres was the reassuring levels of grip they provided while riding up and down the winding ghat sections of Thekkady at a decent clip. However a slight detour off-road onto a light sandy stretch left more to be desired from the set of Duratrails. The company tell us that the Terrabite DB+ is designed to be best suited to tackle this, and although I did get a good feel of that while on a quick run through some patchy sections off on a village road, these particular tyres are meant to take on terrain that's meant to be even more tortuous, like paths plastered with medium-sized rocks, slippery stones, sand ruts and the like, the kind of stuff which we wouldn't experience on the ride out this time around.

Now the prices range from Rs 1,600 - Rs 2,000 for the Beamer; Rs 2,125 - Rs 3,075 for the Duratrails and Rs 2,100 - Rs 2,950 for the Terrabites, and although I reserve judgement on the other two, the price for the Duratrail tread seems quite appropriate given the tyre's mostly on- and light-off-road capabilities. As it stands, we know that TVS Eurogrip offers Proving Extremes and the Roadbound sport touring tyres and this time we got a small sample of what they're like when the going gets rough. We'll have to spend some more time with Beamer HS+ and the Terrabite DB+ on proper motorcycles in the terrain they're best meant for a better understanding and evaluation.

FEATURE | TVS EUROGRIP TYRES

Out in the Real World

TVS Eurogrip are a manufacturer who takes testing seriously and this time they wanted us to experience their products in the real world

Story: Joshua Varghese Photography: TVS Eurogrip

DURING OUR PREVIOUS meeting, TVS Eurogrip had promised that they would introduce new products frequently and in less than a year since, we were invited back to their factory in Madurai. This time, there were three product ranges to experience: the Beamer, the Duralist and the Terrabite.

Our ride began from the factory and we were headed to Thakkady in Kerala. My first stop was at a Yamaha FZ which oddly enough had the Beamer tyre at the front and a Pirelli Extreme HR at the rear, which was also the case with the other motorcycles in that range.

Although I was unable to differentiate the benefits of the Beamer by itself, it must be said that the combination did not hinder the experience in any way. There was enough grip on demand at all times and consequently, no shortage of confidence whatsoever.

The only way to explore the limits of the Beamer individually appeared to be loading the front tyre as much as possible. Under hard braking and while entering corners, it showed no signs of being overwhelmed and performed as expected. It is likely that the Beamer range may be updated to include rear tyres also. Then it could become a reasonable alternative for those looking to change tyres on sub-200cc motorcycles including the Suzuki Gixxer, Yamaha FZ range and TVS Apache RTRs.

Priced in the sub-Rs 2,000 region, it is fairly accessible too.

The Terrabite is the most off-road-focused tyre range I experienced that day and it came shod on some Royal Enfield Classic bikes. While one may say that the Classics belong on the road, their simplicity and durability have encouraged riders to go exploring beyond the confines of tarmac. Our route was mostly over facilities lacking, so an off-road experience was not possible but I must say that they had good road manners. Despite having a criss-cross black pattern, they returned a ride that was stable and composed with adequate levels of grip throughout, even around corners. Riders who are mostly confined to urban limits may not particularly need the Terrabite on their motorcycles but it should prove extremely useful for those who will encounter broken roads and the occasional off-road patch and even for the adventurous ones who are planning trips to Ladakh and what not. This range is priced below Rs 3,000 which is rather attractive for the segment.

The best was saved for last and of all the motorcycles I rode over those two days, the Duralist-equipped Himalayan were my favourite. As capable as they are off the road, there are riders who choose ADVs simply to tackle the unpredictability of our real surfaces. Among them, there are some who have no intention of seeking out off-road escapades. The Duralist is targeted at such users. The Himalayan we rode handled beautifully on the winding road leading up to Thakkady and were equally settled on the long highway stints. I would even go so far as to say that on the road, they were a noticeable improvement over the OEM tyres. Regardless of where one rides to, there is a driver always a construction site en route. At those places, the Duralist did not shy away from a detour off the beaten path. I was able to bypass traffic on more than one occasion by leaving the road for small trails that joined the route further ahead of the congestion. If you are a Himalayan owner who rides mostly on tarmac, then the Duralist is the tyre for you. The most expensive size in this range is close to Rs 3,400 and that is good value if you ask me.

Impressive terminology and flashy presentation are easy to throw around when compared to real-world experience. That is why although these tyres are aimed to the teeth with clever features, the only one we need to be bothered with is grip and that is available in spades. Each product range appears to live up to their claims and the Duralist certainly exceeded my expectations. If you own any of the motorcycles I got to ride on this trip and are in need of a tyre change soon, you would be doing yourself a favour if you were to consider any of these products. Besides, the cost of replacement is very close to what one would pay for OEM rubber. So, why not? [READ MORE](#)

INTERVIEW

"When it comes to agility of a motorcycle, weight has an important role to play."

V Sivaramakrishnan, Chief Technology Officer, TVS Srichakra Limited, talks to us about the latest and upcoming tyres from TVS Eurogrip

Interviewed By: Joshua Varghese

With every increasing demand in performance improvements, do you also develop new polymers?

Yes. We closely work with our Supplier partners in developing tailor-made polymers and additives which are used in our compounds. We work on six to seven such projects every year.

After your success with Aprilia specifically for the Indian market, are you looking at becoming an OEM supplier for other manufacturers as well?

OE customers are very important and invest considerable R&D resources in partnering with our OE customers to develop new tyres

for newer models. We have ongoing developments with our customers viz. Bajaj, Hero, Honda, TVS Motors and Yamaha. We are also in the advanced stages of developing tyres for global suppliers to Pirelli. So a lot of work is going on in premium models, yes.

When developing a tyre, how does its weight factor in?

When it comes to agility of a motorcycle, weight has an important role to play, both from the agility of the bike and from a sustainability and efficacy standpoint. Designers work on striking the right balance of keeping the weight of the tyres at a level which achieves target performance and yet is

efficient in the use of materials. The goal is to reinforce the tyre where it is required. For example, in extreme on-off tyres, the tread will be lighter but the sidewalls will be heavier. By doing this, when the tyre hits a stone, you protect it from a concussion.

Is there anything that you would like to share with our readers?

We launched the Protoneo Extreme, the Roadhounds, the Bee Connect and the Climber. The super-high-performance adventure segment product line which is called the Trailhound will be launched next year. Every year you will see something new from Eurogrip stable. [READ MORE](#)

17.04.2024	Bike India	TVS Eurogrip Launch New Superbike and Adventure-Touring Tyres	

TVS Eurogrip Launch New Superbike and Adventure-Touring Tyres

APRIL 17, 2023 BY ALSHIN THOMAS

LEAVE A COMMENT

TVS Eurogrip, one of India's leading tyre brands, have launched new superbike and adventure-touring tyres.

TVS Eurogrip have decided to foray into the superbike and adventure-touring tyre segment and have launched three new products to their tubeless tyre category. The launch was in Mumbai on 14 April 2023, and the new products were revealed in the presence of MS Dhoni and other Chennai Super Kings (CSK) players. The launch was also attended by business partners of TVS and their customers.

Out in the real world

TVS Eurogrip are a manufacturer who takes testing seriously and this time they wanted us to experience their products in the real world

JOSHUA VARGHESE

During our previous meeting, TVS Eurogrip had promised that they would introduce new products frequently and in less than a year since, we were invited back to their factory in Melur. This time, there were three product ranges to experience; the Beamer, the Duratrail and the Terrabite.

Our ride began from the facility and we were headed to Thekkady in Kerala. My first stint was astride a Yamaha FZ which oddly enough had the Beamer tyre at the front and a Protorq Extreme HR at the rear, which was also the case with the other motorcycles in that range. Although I was unable to differentiate the benefits of the Beamer by itself, it must be said that the combination did not hinder the experience in any way. There was enough grip on demand at all times and consequently, no shortage of confidence whatsoever.

The only way to explore the limits of the Beamer individually appeared to be loading the front tyre as much as possible. Under hard braking and while entering corners, it showed no signs of being overwhelmed and performed as expected. It is likely that the Beamer range may be updated to include rear tyres also. Then it could become a reasonable alternative for those looking to change tyres on sub-200-cc motorcycles including the Suzuki Gixxer, Yamaha FZ range and TVS Apache RTRs. Priced in the sub-Rs 2,500 region, it is fairly accessible too.

The Terrabite is the most off-road-focused tyre range I experienced that day and it came shod on some Royal Enfield Classic 350s. While one may say that the Classics belong on the road, their simplicity and durability have encouraged riders to go exploring beyond the confines of tarmac. Our route was mostly over faultless blacktop, so an off-road experience was not possible but I must say that they had good road manners. Despite having a criss-cross block pattern, they returned a ride that was stable and composed with adequate levels of grip throughout, even around corners. Riders who are mostly confined to urban limits may not particularly need the Terrabite on their motorcycles but it should prove ex-

tremely useful for those who will encounter broken roads and the occasional off-road patch and even for the adventurous ones who are planning trips to Ladakh and what not. This range is priced below Rs 3,000 which is rather attractive for the segment.

The best was saved for last and of all the motorcycles I rode over those two days, the Duratrail-equipped Himalayans were my favourite. As capable as they are off the road, there are riders who choose ADVs simply to tackle the unpredictability of our road surfaces. Among them, there are some who have no intention of seeking out off-road escapades. The Duratrail is targeted at such users. The Himalayans we rode handled beautifully on the winding roads leading up to Thekkady and were equally settled on the long highway stints. I would even go so far as to say that on the road, they were a noticeable improvement over the OEM tyres. Regardless of where one rides to, there is almost always a construction site en route. At those places, the Duratrail did not shy away from a detour off the beaten path. I was able to bypass traffic on more than one occasion by leaving the road for small trails that joined the route further ahead of the congestion. If you are a

Himalayan owner who rides mostly on tarmac, then the Duratrail is the tyre for you. The most expensive size in this range is close to Rs 3,400 and that is good value if you ask me.

Impressive terminology and flashy presentations are easy to throw around when compared to real-world experience.

That is why although these tyres are armed to the teeth with clever features, the only one we need to be bothered with is grip and that is available in spades. Each product range appears to live up to their claims and the Duratrail certainly exceeded my expectations. If you own any of the motorcycles I got to ride on this trip and are in need of a tyre change soon, you would be doing yourself a favour if you were to consider any of these products. Besides, the cost of replacement is very close to what one would pay for OEM rubber. So, why not?

WORDS RITESH PATIL
PHOTOGRAPHY SIDDHANT GADEKAR, TVS EUROGRIP MEDIA

ADVENTURE CALLING

We sample TVS Eurogrip's new range of adventure touring tyres on a road trip in South India

TVS Eurogrip has this tradition of bringing in journalists from across the country to its factory to see the process of tyre manufacturing and then sample said tyres on the road or track. In the last edition of TVS Eurogrip Tread Talks, we tested their premium Roadbound tyres on the racetrack and this time, we are riding from the tyremaker's factory in Madurai, to Thekkady, a picturesque hill station in Kerala and back. We are testing their new range of adventure touring tyres that include the Beamer HS+, Terrabite DB+ and Duratrail EB+.

The fleet of motorcycles shod with the tyres are the Yamaha FZ-S, Suzuki Gixxer and Hero Xtreme 160R. These are shod with the Beamer HS+ at the front tyres. Then we have the Royal Enfield Classic 350 featuring the Terrabite DB+ at the front and rear and Royal Enfield Himalayan fitted with the Duratrail EB+ tyres at both ends. On the first day, we have a quick tour of TVS Eurogrip's factory where we closely

100 www.turbocharged.in • March 2024

PG 088-091_TVS TreadTalks.indd 100 21-03-2024 12:28:07

[FEATURE]

experience how a tyre is manufactured. It is a fascinating process that starts with sorting raw materials, forming a recipe depending on the tyre, mixing it all together to form a compound and ends by adding the treads and grooves to the rubber.

The next day, we leave for Thekkady, a 330km round trip ride. First, we hop onboard the Hero Xtreme shod with the most road-biased tyre in the range - the Beamer HS+. It comes in three different sizes - 90/90-19 S2P TL, 80/100-17 46P TL and 100/80-17 S2P TL. With 50km of pristine four-lane and two-lane highways, the roads feel blissful thanks to the fantastic front end feel and grip levels offered by the tyres. In fact, even under hard braking on dusty surfaces, the tyres remain composed.

Post lunch, we jump onto a Royal Enfield Classic 350 shod with the Terrabite DB+ tyres. It is available in four sizes - 90/90-19 S2P TL, 110/90-18 61P TT, 90/90-19 S2P TL and 110/90-18 61P TL. The tyres feature an aggressive tread pattern given its intended usage on rough unpaved roads. The large block treads on the Terrabite DB+ do result in noticeable tyre noise at highway speeds but the tyres offer a good amount of comfort and the Classic 350 felt surprisingly eager to lean into corners even on smooth tarmac.

An hour later we make another quick stop where we hop onto the Royal Enfield Himalayan shod with the Duratrail EB+. TVS Eurogrip claims that these are the most trail ready tyres in their lineup but unfortunately, our route didn't involve any such terrain to test them out. But we did get to test their on-road performance and they turned out to be quite impressive, especially with the cornering grip they offered on the ghat section just before Thekkady.

The next day was fairly uneventful, except for the ride down the hill station where we were pushing slightly harder than the day before. Riding the Yamaha FZ-S, we were quite impressed by the feedback under braking and cornering that affords the rider more confidence.

Prices start at ₹ 1,600 for the Beamer, ₹ 2,125 for the Duratrail and ₹ 2,100 for the Terrabite range of tyres. Overall, like before, this edition of TVS Eurogrip Tread Talks was a successful one, having given us a theoretical and practical schooling in the art of tyre making. **✎**

TOP RIGHT TO BOTTOM RIGHT: The life of a TVS Eurogrip tyre begins at its world-class factory in Madurai. Beamer HS+ are the most road-focused tyre in TVS Eurogrip's adventure touring tyre lineup. Terrabite DB+ features an aggressive tread pattern to tackle rough unpaved roads. Duratrail EB+ are the most off-road focused tyres in the range yet offer good on-road grip levels

We sample TVS Eurogrip's new range of adventure touring tyres on on a road trip in South India

TVS Eurogrip has this long tradition of bringing in journalists from across the country to its factory to see the process of tyre manufacturing and then sample said tyres on the road or track. In the last edition of TVS Eurogrip Tread Talks, we tested their premium RoadHound tyres on the racetrack and for this edition, we are out on a ride from the tyre maker's factory in Madurai, to Thekkady, a picturesque hill station in Kerala and back. We are testing their new range of adventure touring tyres that include the Beamer HS+, Terrabite DB+ and Duratrail EB+.

ride TVS EUROGRIP TYRE TEST

BUILT TOUGH

TVS Eurogrip gave us an opportunity to test its Duratrail and Terrabite off-road / ADV tyres during a 150km road trip to a quaint hill station in Kerala. Here is what we think about their performance...

WORDS KARAN MATHUR • PHOTOGRAPHY SUNIL CHAUHAN

While making tyres purely for on-road purposes is challenging, such tyres offer a lot more predictability than those built for off-road or dual-purpose applications. The diverse variety of conditions that these tyres withstand in the real world is simply impossible to replicate in a controlled environment. While our first experience of TVS Eurogrip's tread talk event involved testing its Roadbound superbike tyres at the Kari Motor Speedway, this time, we had the opportunity to test its dual-purpose tyres in real-world conditions. The tyres in question were the off-road / rough-road Terrabite and dual-purpose Duratrail tyres. Our journey to test these tyres began at TVS Eurogrip's headquarters in Madurai, spanning 150km southwards to the hill station of Thekkady in Kerala.

FIRST IMPRESSIONS

As soon as you encounter these two tyre models first-hand, their distinct purposes become immediately apparent. The Terrabite series features a knobby design with big blocks and deep treads to provide the best traction possible on loose surfaces. The Duratrail tyres, on the other hand, feature a block-like pattern on the outer section for enhanced grip and have an overall flatter, rounded profile for better stability and enhanced cornering grip on the tarmac.

Both models are designed to prioritize traction on loose surfaces, durability, stability and longevity. The Terrabite tyres are available in just two sizes - 90/90-19 and 110/90-18. For our

24 FEBRUARY 2024 | AUTOX.COM

ride TVS EUROGRIP TYRE TEST

testing purposes, TVS Eurogrip had installed these tyres on a few Royal Enfield Classic 350s. The Duratrail tyres, on the other hand, are meant for a broader purpose and, therefore, are available in a wide range of sizes. For the test, we used the Royal Enfield Himalayan to evaluate their performance in dual-purpose usage conditions.

CITY AND HIGHWAY PERFORMANCE

Before delving into the performance of these tyres under the conditions we subjected them to, it's important to note that the bikes we had for the test were not in showroom-fresh condition. Consequently, there was a degree of uncertainty regarding their behaviour. For the first leg of our journey, I grabbed the keys to one of the RE Himalayan bikes and set off for our first pit stop. Of course, the best way to test the grip levels of a tyre is to push it to its limits in an attempt to make it lose traction. In this regard, I must say that the Duratrail tyres performed exceptionally well, for I found it quite difficult to make them lose traction over rough patches. On the tarmac, the Duratrail felt stable, although vibrations became a bit annoying while riding at triple-digit speeds. As I said, the bikes we rode were not in the best condition, which made it difficult to accurately assess the road noise and harshness of the tyres. However, the consensus of all the journalists present for the test was that the grip offered by the Duratrail tyres was exceptional.

One aspect of the tyres that could do with some improvement is the time they take for heat build-up. I first noticed this issue with the Roadbound tyres, and during the test, it became evident that both these models also suffer from the same issue. Now, TVS Eurogrip diligently strives to design tyres that are sturdy and user-friendly. Consequently, because they are built for longevity, they feel quite stiff when they are cold. However, once they warm up, their grip and manoeuvrability improve drastically. The heat build-up not just affects traction but also the tyre's braking performance. The only problem is that

these tyres take longer to heat up, meaning the more you ride, the better they perform.

ROUGH ROAD AND LOOSE SURFACES

For the second leg of our journey, I managed to get my hands on a motorcycle fitted with Terrabite tyres, and thankfully, the route ahead comprised a mix of gravel roads, broken tarmac, and uphill ghat sections. This, in my opinion, offered an ideal condition to thoroughly test these tyres. As soon as we began the journey, I noticed that the Terrabite tyres also suffered from the slow heat build-up issue. However, given that when we resumed our ride, the ambient temperatures were quite high, the tyres quickly gained grip.

Compared to the Duratrail tyres, the Terrabite tyres are engineered to offer even better grip in rough conditions, which is precisely what we subjected them to. On the way, we tested them on loose gravel, muddy tracks, small water crossings, and extremely broken roads. Surprisingly, the tyres easily dealt with all these conditions, making me feel the need for more challenging terrains to push them to their performance limits. Without hesitation, we ventured off the paved roads and traversed dirt patches along the highway, where the tyres felt even more at home.

By this point, we were just 30km away from our destination. The final stretch of the journey encompassed 12km of

winding ghat sections interspersed with frequent broken patches of road. The only way to truly test these tyres in this terrain was to adopt a more aggressive approach, which meant a blatant disregard for mechanical sympathy and pushing full throttle out of every corner to assess traction. However, regardless of my attempts to unsettle the grip, the tyres remained confidently planted on the road. I found myself particularly impressed by their performance on the twisty sections rather than on smooth, straight stretches of the road.

VERDICT AND PRICE

Overall, I think, the TVS Eurogrip Duratrail and Terrabite tyres are a valuable addition to the company's line-up and serve as an excellent option for looking for the perfect rubber companion for motorcycles. While they do have some room for improvement in terms of heat build-up, vibration control, and road noise, they offer excellent performance - in fact, during the test, they never gave us an opportunity to complain. In terms of prices, the Duratrail tyres range from ₹2,125 to ₹3,675, while the Terrabite tyres are priced between ₹2,100 and ₹2,500, depending on size. I would highly recommend these tyres to adventure enthusiasts and motorcyclists who frequently traverse rough roads, especially considering the competitive pricing offered by the company, making them great value-for-money products.

EXPERIENCE
TVS EUROGRIP TREAD TALKS

TREAD UPON TARMAC

No better way to experience a new set of tyres than hitting the open roads

By Keshav Teja Purnani Photographs TVS Eurogrip team

TVS Srichakra facility in Madurai, all the way to Thiruvananthapuram, and back. A bunch of 12 auto-journeys, a fleet of 13 motorcycles, and a support crew set off from the premises around mid-afternoon, at a reasonable pace and as gratified as can be in decent effort was made.

The fleet consisted of three RE Classic 350s, shot with the Terrabite DB+, and three RE Himalayan 411s, shot with the Dualtrail RH+. There were also three Yamaha FZs, two Suzuki Glazers 150s, a Hero Xtreme 160, and a TVS Apache RTR, all wearing Extremes on the front and Protorg Extremes

A well-repeated observation made by us over the years is the fact that most people tend to overlook one of the most important components of a motorcycle. The one thing that is in constant contact (not to mention, the only point of contact) with Mother Earth is tyres. By people, I mean both vehicle manufacturers as well as consumers alike. The former usually doesn't bother to offer top-quality tyres as standard on their motorcycles; the latter often just doesn't seem to care.

Tyre manufacturers, like TVS Eurogrip, on the other hand, seem to be working double-time to design and engineer tyres that are capable of undergoing extreme duress and still perform extremely well. The last time we visited their facility in Madurai, we got to observe the process that goes into making their world-class tyres, especially the Roadhound range of zero-degree steel-belted radial tyres. We also got to test the same on the track at Kart Motor Speedway.

This time around, the subject of our evaluation was the Terrabite, as well as the Dualtrail range of adventure tyres, with a promise of good on-road as well as off-road performance. The means of testing them were different this time around, though, as we were to embark on a journey from the

on the rear. With pistons along the route at around every 50 km, we shuffled the bikes among ourselves so that everyone got to experience all tyres equally. More often than not, there was a scramble for the keys to the three Himalayans.

Anyway, it wasn't long before we came upon a spot with a private road where we could try and have some fun with the tyres. Various manoeuvres were implemented: hard braking, speeding up, whacking the throttle open, breaking traction, finding traction, and so on. Both the Terrabite and the Dualtrail tyres fared pretty well, and we weren't disappointed in the least. Carrying on, we cruised vast expanses of paddy fields to either side of the highway, right around dusk, and it was such a picturesque setting, riding off into the sunset.

As we reached Thiruvananthapuram, the sun had already set, and the cold was just about to set in. We each retired to our respective rooms for a much-needed hot shower, after which we reconvened for dinner. After a heavy meal, a few of us decided to explore the nearby shops and handicraft stores, which were surprisingly kept open well into the night. Another intriguing thing

... it wasn't long before we came upon a spot with a private road where we could try and have some fun with the tyres

I realised was that the bulk of all these merchants were from Kashmir, having made this little hill station in Kerala their home.

The next morning started pretty early, as we wanted to avoid peak traffic on those narrow roadways. The descent saw to it that we got to enjoy a decent amount of curves where we could test out the levels of grip on offer by the tyres. Soon we were back in Tamil Nadu, keeping pace at the upper limit of the speed restrictions for as long as we could maintain it. I for one wanted to slow

down a tad and savour the route, considering that it is rare for us to see such well-maintained roads elsewhere.

I've always loved the highways in and around suburban and rural Tamil Nadu. Granted, they can be narrow when compared to the bustling multi-laned 'express' highways found elsewhere, but they still feel more welcoming. Dotted on either side by large sanctified trees, their branches coming together to form a canopy of sorts over the single two-lane road, our conveyance passed through in a rhythmic line, much like an army of ants.

The ride soon concluded, as we found ourselves back at the TVS Srichakra facility, slightly weary, but pretty content. As seamless as the journey seemed, a lot rode on how good the tyres were, with well-deserved appreciation from each and every one of us. Now I wait eagerly to wear out the tyres on our long-term motorcycles so that I can replace them with a pair of brand new ones from TVS Eurogrip and set out on new adventures. ■

TVS Eurogrip has been producing some amazing tyres over the past few years such as the Remora and Protora. However, today they have launched their new range of adventure touring tyres: Beamer HS+, Duratrail EB+ and Terrabite DB+. Recently, I had the chance to visit their factory in Madurai where we were briefed about the tyres and also about the various processes and technologies the tyre manufacturer uses to make the products. As always, it was followed by a tour of the factory, showing us how these tyres are made.

For most of us, tyres are just black coloured hoops made of rubber that are attached to motorcycle wheels. They are meant to roll with least resistance possible, offer the most amount of grip in every situation and be resistant to punctures. It all seems very easy but there's a lot and I mean unfathomably lot to design and develop tyres. It's something that struck me in the two days I spent experiencing two new tyres by TVS Eurogrip.

Indian manufacturers are stepping up their game and based on what we have seen so far, we are catching up with the world quicker than ever before. This applies not only to motorcycle manufacturers but also to the manufacturers of the various parts that make a motorcycle work. One of the most important components in that list is tyres and Eurogrip is at the forefront when it comes to that.
