

At the end of November, we attended **TransBorgaro** as a sponsor, one of Italy's most iconic off-road events. Our on-site booth allowed us to experience the event from the inside and engage with a passionate audience, in an authentic context where competition, history, and technique come together.

In recent weeks, the *Roadhound* has been featured in two international reviews in Asia: a video review by the media outlet **Bike IN** in Taiwan ([watch the video](#)) and a field test in Thailand, covering over 4,500 km across Thailand and Malaysia on hot asphalt, heavy rain, and challenging surfaces.

In both cases, the tyre demonstrated high-speed stability, excellent water drainage, and progressive cornering behaviour, confirming its reliability and performance even under extreme conditions.

Last Saturday, our local distributor *HoWun* participated in the annual *Honda* gathering in Taiwan. The event provided a valuable opportunity for direct contact with the *Honda* community and engagement with end users. Feedback highlighted improved cornering stability of the *Roadhound* compared to OE *Michelin Road 5* tyres, confirming the product's performance in real-world use.

A six-panel brochure dedicated to **Trailhound STR** and **Trailhound Wild** for the adventure motorcycle segment is now available, designed especially for use at trade shows and events. The material provides a clear overview of positioning, technical features, and intended applications for both products. The brochure is available for download [here](#).

A few weeks ago, our Korean distributor, 3L, participated with a stand at the **2025 Hard Enduro Korea – Sanlim Final Round**, the season finale and a key event for the national Hard Enduro scene, presenting the full range of our tires to riders, teams, and enthusiasts.
