

CONQUER THE TOP OF THE RACE WITH EUROGRIP CLIMBER XC-R TYRES

CLIMBER XC-R is new Eurogrip tyre for Enduro Fim competitions, developed in the Italian R&D Center and tested in partnership with renowned international enduro racers.

CLIMBER XC-R will be available in 3 versions featuring dedicated compounds and structures:

MEDIUM: the most versatile spec, perfect for intermediate to soft terrains

SOFT: designed for racing purpose when the enduro tracks get tougher and higher degree of adherence is required

SUPERSOFT: the stickiest version, providing the most traction for the more extreme races

All three versions employ symmetrical tread pattern, allowing the rider to reverse the tyre on its rim, thereby prolonging its effective lifecycle. Knobs shape and layout, coupled with the newly formulated compounds, increase traction and resistance to wearing and tearing.

The adoption of 'Synthetic fibers X-ply structure' drastically improves traction and the capability of the tyre to support the bike when leaning, landing from jumps or climbing obstacles. At the same times, it provides enough flexibility, especially on the SOFT and SUPERSOFT configurations, to increase the contact area on harder surfaces.

CLIMBER XC-R will be available in 140/80 – 18 (Enduro FIM homologated) starting from 1st quarter of 2024.
