

Milan (Italy) – 05/11/2023

EUROGRIP TO SHOWCASE ITS FULL RANGE OF TYRES AT EICMA 2023

EUROGRIP, a brand focused on tyres for motorcycles and scooters, will be present at EICMA 2023 happening in Milan, Italy, from the 7th to the 12th of November.

Alongside the existing products, already available globally, EUROGRIP will showcase its new range of high-performance tyres, designed in Italy, and tested on international tracks and roads.

CLIMBER's family of tyres for motocross, enduro and cross-country, will be enriched with the addition of **CLIMBER MX Junior**, a new product dedicated to young off-road riders. CLIMBER MX Junior features knob geometry, compound and structure tuned for training, racing and leisure riding across various terrains on off-road bikes fitting wheels between 12" and 19".

Good news for the enduro riders as well: **CLIMBER XC-R** will bring 3 new versions of the 140/80 – 18 highly popular rear size in 3 new FIM compliant versions:

- Medium Compound: the most versatile of the 3, good for medium to soft terrains
- Soft Compound: indicated for racing purposes on highly technical enduro, including harder and/or slippery surfaces
- Supersoft Compound: the stickiest version, dedicated for the harshest courses

Moving towards road applications, the recently introduced **ROADHOUND** sport touring tyre sees the addition of new sizes with both radial and x-ply construction, aiming at fitting even more sport, naked and touring motorcycles. The new X-Ply range is aimed at small to medium displacement bikes, modern classics and older glories.

Bridging the gap between road and off-road, the prototypes for two new Trail products will be showcased for the 1st time in EICMA:

- **TRAILHOUND SCR** has been designed for modern classics and older glories, to aid dynamic road performances, and a scrambler-y look that has been much appreciated by expert test riders.
- **TRAILHOUND STR** brings Sport Touring performances to Medium and Large Adventure bikes, with technology aimed at matching the performances and versatility of these vehicles.

Speaking of high performances, Eurogrip will be introducing a sportier version of the widely appreciated BEE CONNECT scooter tyre, designated as UHP (Ultra High Performance). **BEE CONNECT UHP** features a softer compound specifically dedicated to those seeking high speed scooter rides.

Its not just new tyres showcase at the show, Eurogrip will unveil **EUROGRIP POINT** a new initiative in the retail space. As part of this initiative, we will identify potential retail partners who would be interested in making Eurogrip tyres a prominent part of their tyre portfolio and business. Eurogrip Point partners will enjoy several benefits that include POS Materials, trade promotions and online dealer locator referrals.

We have a few more exciting developments in store for Eurogrip fans and partners, including the impending launch of a new website and collaborations with well-known vehicle manufacturers.

Year 2023 has been outstanding for Eurogrip's global growth, and 2024 is looking very positive as we line up an array of interesting new products for a wide range of two-wheelers.
