

Milan (Italy) – 16/05/2022

EUROGRIP, brand of motorcycles and scooter tyres designed and tested in Italy, will be present at The Tire Cologne 2022 and AutoPromoTec 2022 exhibitions with their range of high performance tyres developed for international markets.

The two fairs represent the perfect place for the brand to showcase the results of the intensive R&D work done on process and product, ranging from compound and carcass materials to profiles and tread designs.

Present among the tyres which will be on display in the two international stages, **BEE CONNECT** is Eurogrip's proposal for scooter vehicles, launched with great success in 2021 for urban and countryside commuting. 2022 has seen **BEE CONNECT**'s range of sizes further extended in order to reach more than 95% circulating park of target vehicles. **BEE CONNECT** has been particularly appreciated thanks to its combination of dynamical performances on both wet and dry asphalt, coupled with the attention to aesthetic details such as the Yellow Bee label cured directly on the tyre sidewall.

BEE MOVING, a new member of the BEE Family, will make its debut appearance at both exhibitions. Expected to launch in the markets by second half of 2022, **BEE MOVING** will bring performances such as versatility, durability and comfort on ultra light transport vehicles like Piaggio 3 wheelers and more.

PROTORQ EXTREME is the new radial tyre dedicated to medium displacement motorcycles such as KTM Duke 390 and BWM G310R, whose popularity is growing internationally. Its 0° steel belt coupled with the latest compounds and pro-handling profile will ensure satisfaction during both sporty and tourist riding.

Shifting from tarmac to off-road, **CLIMBER XC** represents EUROGRIP new entry for Motocross, Enduro and Cross-Country. Aimed at both professional and amateur riders, **CLIMBER XC** grants high performances in traction, riding precision, control and lateral support across a variety of mid-soft and mid-hard terrains.

The list of new products is far from over: **E-TORQ** is a low rolling resistance tyre dedicated to electric scooters, while a couple of entries for low displacement bikes are **DURATRAIL EB+** and **BEAMER HS+/YS+**, the former for on/off usage and the latter for asphalt riding.

ROADHOUND prototypes will be on display at both The Tire and AutoPromoTec, sport touring tyre in both radial (naked, sport and touring bikes with medium/high displacement) and x-ply (modern classic and medium/low displacement bikes) constructions. The international launch of this new product is foreseen for last quarter of 2022, following the competition of rigorous and extensive refinement and testing process.

Accessories such as the new **butyl tubes** (standard/reinforced/ultra reinforced for off-road) will make an appearance as well.

"After the interruption due to COVID pandemic, we are enthusiast to be back on some of the most prestigious stages in the automotive industry" said Andrea Bianchi Milella, Marketing Manager of Eurogrip brand, "Development work never ceased to continue in our facilities, and we are confident that retailers and consumers alike will appreciate the results reached in both performances and appeal"

EUROGRIP stalls will be located in the following positions:

- The Tire Cologne ➔ Hall 6.1 – Pos. B40/C41
- Autopromotec ➔ Hall 20 Pos. C61 (within GEXPO stand)
