

LOCATION

Over 1000 km on the roads of central-northern Italy on different types of roads

TEST VEHICLE

BMW R1300 GS

PERIOD

May 2025

THE TEST

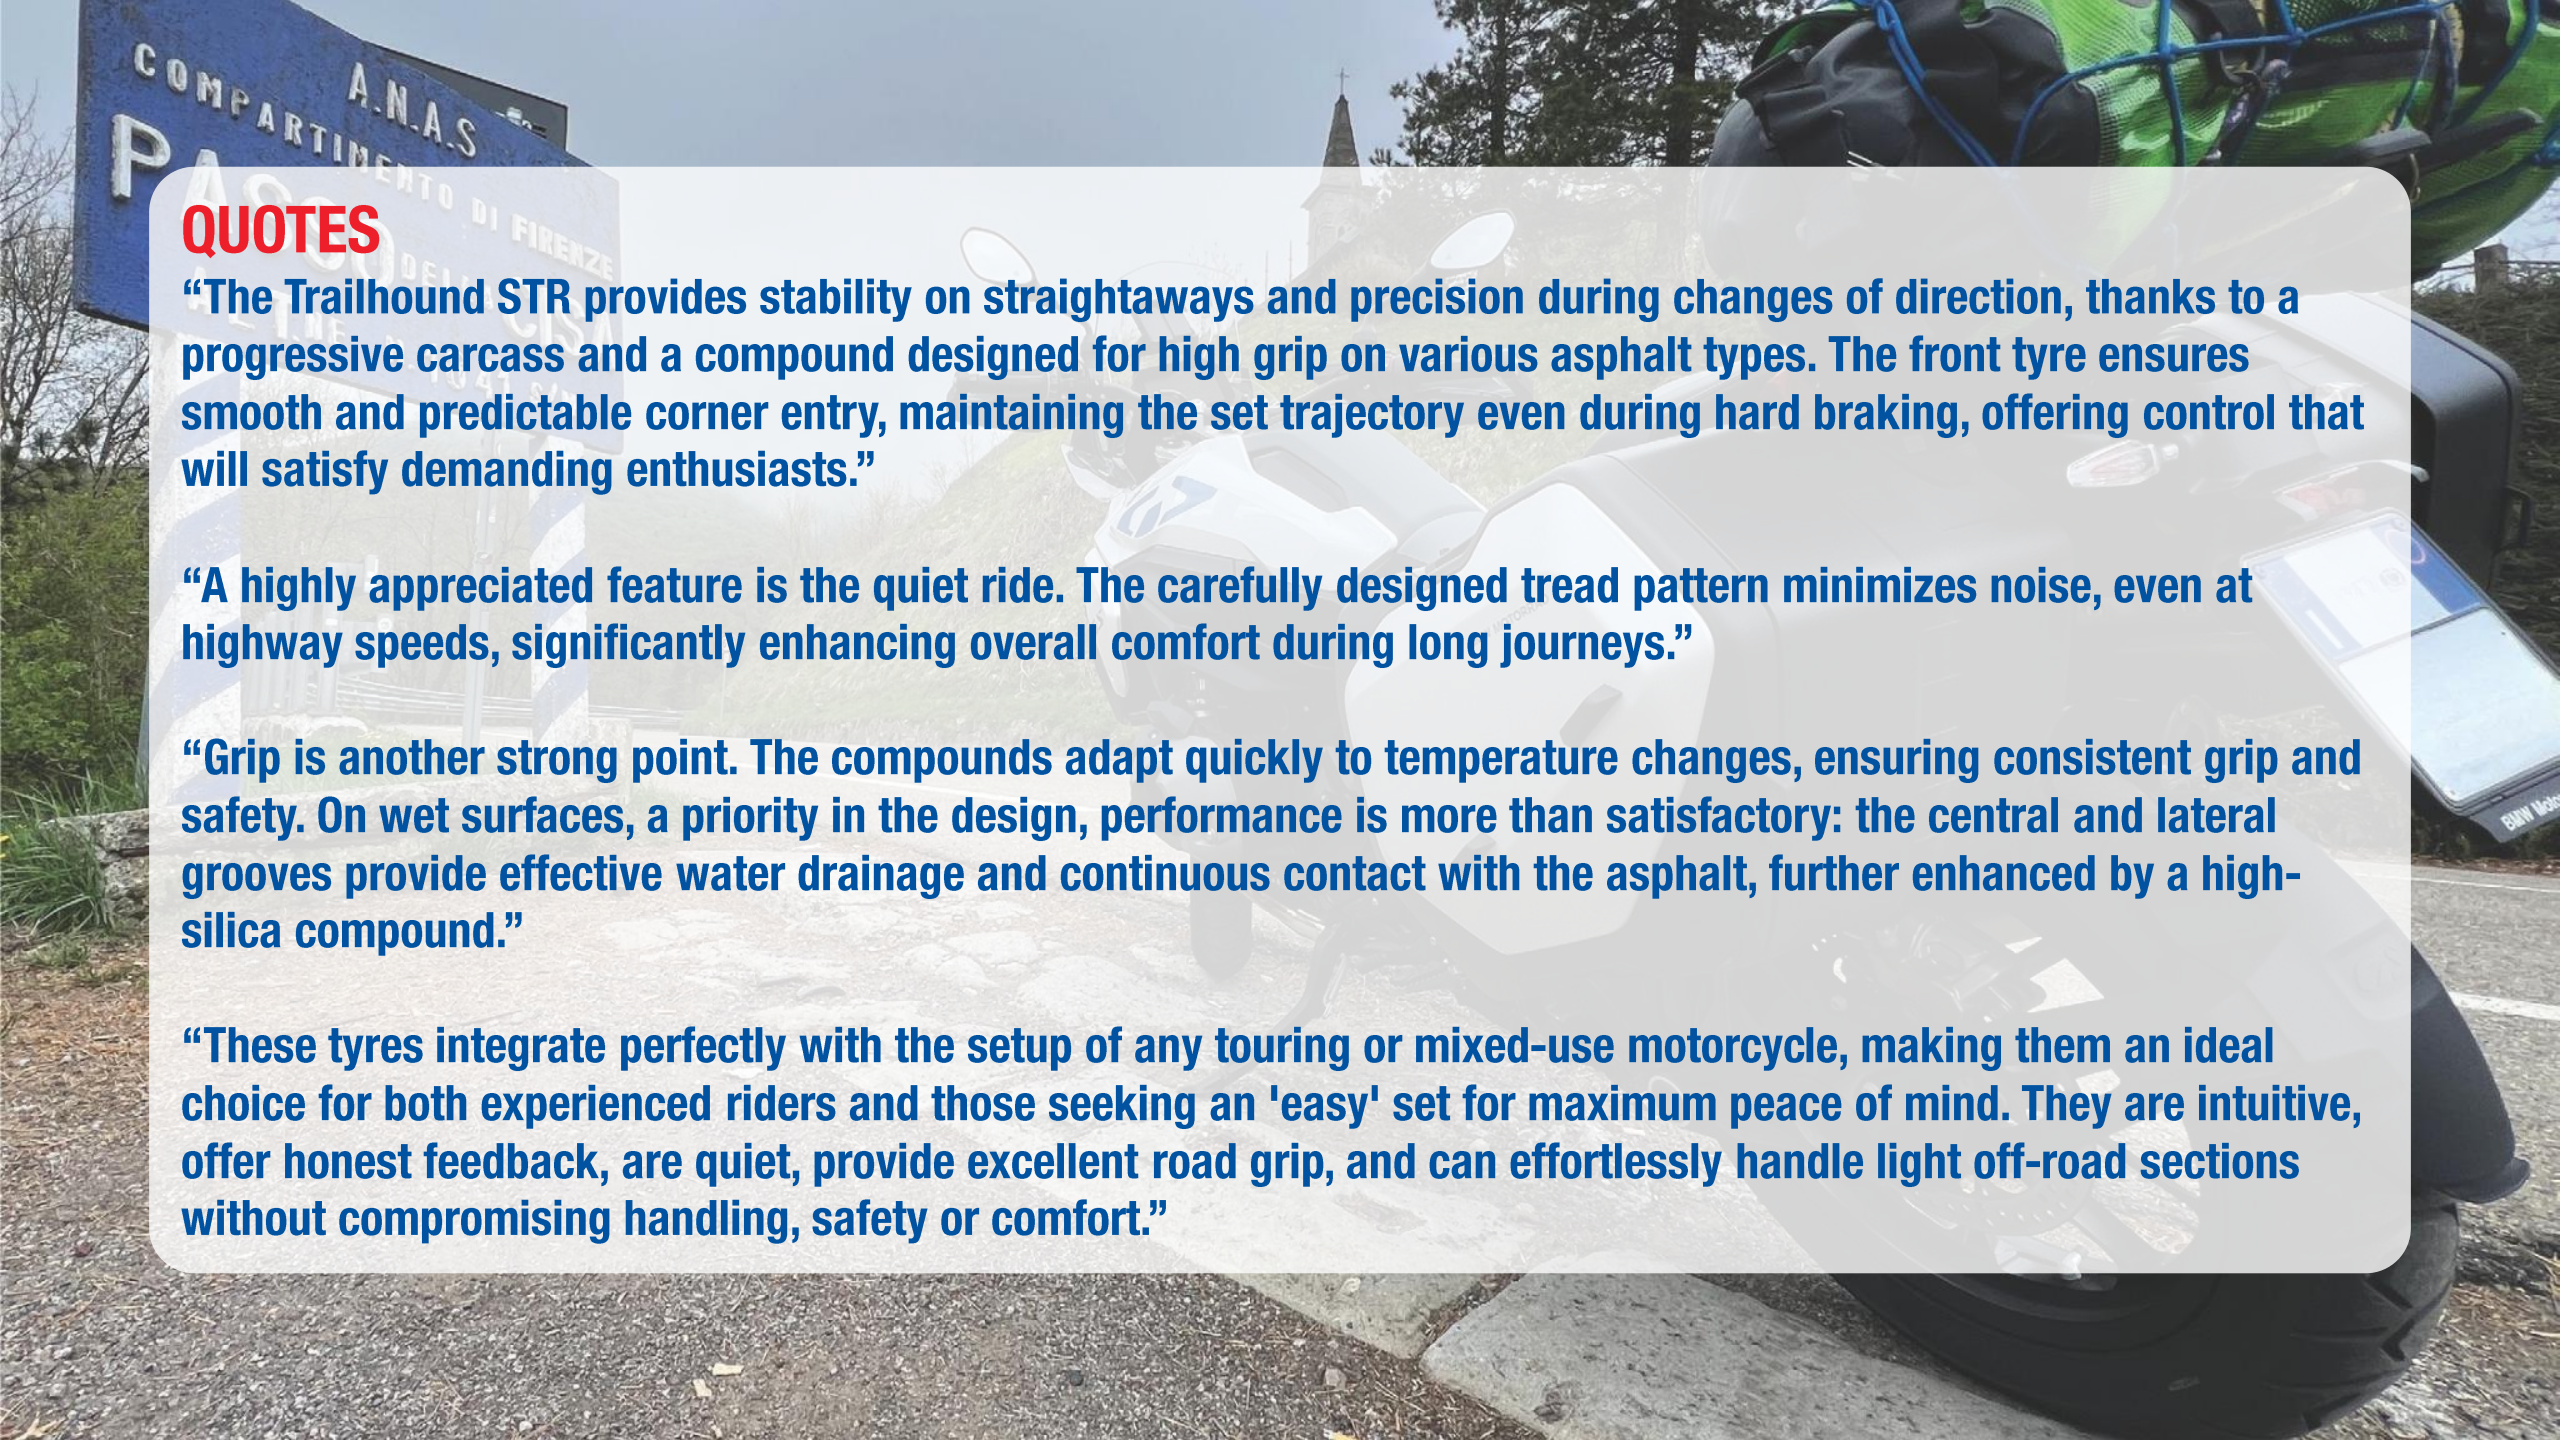

The test of the new Trailhound STR tyres was conducted by the editorial team of *About BMW*, a premium Italian magazine with quarterly publication, fully dedicated to the world of BMW motorcycles.

The test took place over a three-day ride covering over 1,000 km across Northern and Central Italy, from Milan to Volterra, avoiding highways as much as possible and exploring twisty mountain roads, including the iconic *Passo della Cisa*, which connects Tuscany and Liguria.

The motorcycle used was the BMW R1300GS, a benchmark in the adventure touring segment, chosen for its capability to highlight tyre performance across varied conditions: from high-speed asphalt riding to light gravel tracks, both dry and wet.

KEY RESULTS

- ⇒ Excellent stability and control on both dry and wet tarmac.
- ⇒ Smooth and predictable ride feedback, even when fully loaded with passenger and luggage.
- ⇒ The tyre structure absorbs vibrations efficiently without compromising riding precision, thanks to a carcass that remains flexible and responsive under load.
- ⇒ The tread pattern ensures effective water evacuation and confidence in wet grip, even in dynamic riding.
- ⇒ Maintains consistent performance across a variety of surfaces, including light off-road, without sacrificing comfort or control.

QUOTES

“The Trailhound STR provides stability on straightaways and precision during changes of direction, thanks to a progressive carcass and a compound designed for high grip on various asphalt types. The front tyre ensures smooth and predictable corner entry, maintaining the set trajectory even during hard braking, offering control that will satisfy demanding enthusiasts.”

“A highly appreciated feature is the quiet ride. The carefully designed tread pattern minimizes noise, even at highway speeds, significantly enhancing overall comfort during long journeys.”

“Grip is another strong point. The compounds adapt quickly to temperature changes, ensuring consistent grip and safety. On wet surfaces, a priority in the design, performance is more than satisfactory: the central and lateral grooves provide effective water drainage and continuous contact with the asphalt, further enhanced by a high-silica compound.”

“These tyres integrate perfectly with the setup of any touring or mixed-use motorcycle, making them an ideal choice for both experienced riders and those seeking an 'easy' set for maximum peace of mind. They are intuitive, offer honest feedback, are quiet, provide excellent road grip, and can effortlessly handle light off-road sections without compromising handling, safety or comfort.”

ABOUT TRAILHOUND STR

FOLLOW THE TRAIL AND MAKE IT YOUR OWN – A 90/10 road/trail tyre built for long-distance asphalt travel with the freedom to venture confidently onto gravel and dirt.

MAIN FEATURES:

- Radial structure with 0° steel belt – Ensures responsive handling and consistent control across speed ranges
- Quadrazone multicomponent technology on selected rear sizes – Distinct compound zones for optimized grip, mileage and cornering stability
- High Silica Compound – Enhances traction and flexibility in cold or wet road conditions
- Adaptive tread design – Engineered for balanced on-road wear and confident traction on unpaved surfaces
- Profile and casing optimization – Improves rider feedback, line precision and overall comfort on varied terrain

SIZES

RIM	SIZE	WHEEL
17	120/90 – 17 64H TL*	REAR
