

LOCATION

1,000 km across southern Italy (Puglia), including paved roads, white gravel tracks and light off-road sections

TEST VEHICLE

Royal Enfield Interceptor 650

PERIOD

April 2025

THE TEST

The Eurogrip *Trailhound SCR* test was conducted independently by *Andrea Cervone*, a content creator and experienced motorcyclist known for real-world reviews of classic and modern bikes.

The testing route explored the varied terrain of southern Italy's Puglia region, combining smooth tarmac, broken pavement, light off-road trails, and short wet sections after rainfall.

The bike of choice was the *Royal Enfield Interceptor 650*, a modern classic perfectly suited to evaluate how much this tyre could extend the motorcycle's real-world capabilities beyond asphalt.

KEY RESULTS

- ⇒ Excellent grip on both dry and wet tarmac, with noticeably improved front-end agility and confidence
- ⇒ Strong traction on gravel and light off-road sections, thanks to the balanced semi-block tread design
- ⇒ Low noise and minimal vibration levels, preserving comfort even on longer road sections
- ⇒ A versatile tyre that invites riders to explore beyond asphalt without compromising on-road performance

QUOTES

“This tyre truly makes you want to take your bike on routes you would have never considered before — it opens up new possibilities.”

“It’s clearly a tyre designed with modern classics in mind, giving them the confidence to handle light off-road conditions with ease.”

“Even on wet tarmac — the kind that normally feels slippery — it performed surprisingly well, offering great front-end confidence.”

“Compared to the stock tyres, the front-end handling has completely transformed — the bike now feels lighter, noticeably more agile, and more precise when cornering.”

“There’s no noticeable vibration or extra noise on the road — a really impressive result for a semi-knobby tyre like this.”

ABOUT TRAILHOUND SCR

WHAT IS TIMELESS NEVER GOES OUT OF STYLE

Trailhound SCR brings classic bikes into the present, offering grip, control, and safety for today's roads, without losing their vintage charm.

Perfect for riders who want to go beyond city streets, it combines solid road performance with light off-road versatility, in tune with modern classics and café racers.

MAIN FEATURES:

- ⇒ Radial structure with 0° steel belt – Ensures responsive handling and consistent control across speed ranges
- ⇒ X-Ply structure with high quality synthetic fibers – Increases comfort and control by filtering out road imperfections and vibrations
- ⇒ High Silica Compound – Enhances traction and flexibility in cold or wet road conditions
- ⇒ Tread block geometry – Optimized for efficient water evacuation and enhanced traction on light off-road surfaces
- ⇒ Balanced profile and contact patch – Ensures agility, predictable lean transitions, and high stability when cornering

SIZES

RIM	SIZE	WHEEL
