

TEST

The *InMoto* editorial team tested the Eurogrip Trailhound Wild tyres during a test day at the Vallelunga proving ground and surrounding roads, using a Honda Africa Twin 1100 Adventure Sports.

The test was carried out in mixed conditions, alternating between paved roads and light off-road sections, with the aim of evaluating the tyre's real-world behaviour in a 70% road / 30% off-road adventure application.

Particular attention was given to handling progression, traction on light off-road terrain and the motorcycle's overall stability across different adventure riding scenarios.

KEY RESULTS

- ➔ The Trailhounds Wild delivers balanced on-road performance, with a progressive and rounded turn-in that promotes control and predictability on large-displacement adventure bikes.
- ➔ The tyre structure provides stability and smooth handling, reducing abrupt reactions during direction changes while maintaining a good level of precision at sustained speeds.
- ➔ Off-road, rear-wheel traction is effective and progressive, offering good control of drive on low-grip surfaces.
- ➔ The tread pattern, featuring large and widely spaced tread blocks, promotes traction on loose terrain and helps the motorcycle maintain forward drive under acceleration on low-adhesion surfaces.
- ➔ Overall, the tyre proves to be a well-balanced adventure solution, suited to mixed touring use on both paved roads and light off-road terrain.

QUOTES

"The turn-in on asphalt is very progressive and rounded, without the sudden drop or abrupt reactions often associated with more pointed tyre profiles."

"There is always plenty of rear-wheel traction, even when accelerating hard on dirt."

"The spacing between the tread blocks is quite wide, allowing the tyre to grip loose terrain and drive the motorcycle forward."

"The tyre is designed for progressive handling, so it never feels overly nervous or abrupt."

"For a tyre designed around a 70% road and 30% off-road split, it behaved exactly as expected."

Gravel, cobblestones, dirt roads, asphalt, rough surfaces... no terrain is off limits for the Trailhound Wild: a 70/30 tyre developed to give riders maximum freedom to explore.

KEY FEATURES:

- ▀ **Radial construction with 0° steel belt and dual-compound tread / high-silica compound** - Superior handling, agility and control on cold and wet asphalt, with enhanced grip and mileage.
- ▀ **High-strength synthetic fibre construction and multi-radius profile** - Improved stability, progressive cornering transitions and increased load-carrying capability.
- ▀ **70/30 tread pattern with optimised tread blocks** - Balanced performance on both paved and unpaved surfaces, ensuring predictable behaviour across a wide range of riding conditions.
- ▀ **Optimised groove layout** - Efficient water evacuation and self-cleaning capability from mud and debris.

SIZES

RIM	SIZES	POSITION
17	150/70 R 17 69V TL M+S	REAR
	170/60 R 17 72V TL M+S	REAR
18	150/70 R 18 70V TL M+S	REAR
19	100/90 - 19 57V TL M+S	FRONT
	110/80 R 19 59V TL M+S	FRONT
	120/70 R 19 60V TL M+S	FRONT
21	90/90 - 21 54V TL M+S	FRONT
