

## TEST

Moto.it tested the Eurogrip Trailhound Wild tyres in Sicily on a Honda Africa Twin, covering approximately 500 km across urban roads, motorways, winding mountain roads and compact dirt tracks.

The test included around 100 km of city riding as an initial phase, followed by motorway transfers, mixed routes around Mount Etna and sections of light off-road terrain, with the aim of evaluating the tyre's performance in the main usage scenarios of a modern adventure motorcycle.

The focus was on the versatility of the Trailhound Wild, a tyre designed for 70% road and 30% off-road use, assessing its stability, grip, comfort, handling precision and behaviour on low-traction surfaces.

## KEY RESULTS

- ⇒ The test highlighted a highly balanced and consistent tyre, capable of delivering predictable performance across urban roads, motorways, twisty tarmac and light off-road terrain.
- ⇒ On the motorway, it stands out for its stability and ability to absorb road imperfections, keeping the motorcycle composed even at sustained speeds.
- ⇒ On paved roads, it offers plenty of grip and a very progressive, consistent lean-in, providing a strong sense of support and control.
- ⇒ The front tyre feels precise and stable while cornering, helping the motorcycle hold its line once the trajectory has been set.
- ⇒ In light off-road conditions, the tyre remains predictable and controllable, with good traction and manageable slides that inspire confidence even on low-grip surfaces.

## QUOTES

*"The tyre is extremely stable, even at motorway speeds. The bike stays very composed and absorbs bumps really well."*

*"The first impression is excellent support, plenty of grip at lean angle and a very progressive, consistent turn-in."*

*"The front end is very precise and inspires a lot of confidence. Once you've chosen your line, the bike stays there."*

*"I found these tyres extremely predictable off-road, and I really liked how manageable the slides were. They are very easy to control with the throttle."*

*"These are tyres you can really do everything with, from touring to light off-road riding, and they are great fun when the road gets twisty."*

Gravel, cobblestones, dirt roads, asphalt, rough surfaces... no terrain is off limits for the Trailhound Wild: a 70/30 tyre developed to give riders maximum freedom to explore.

## KEY FEATURES:

- ▀ Radial construction with 0° steel belt and dual-compound tread / high-silica compound - Superior handling, agility and control on cold and wet asphalt, with enhanced grip and mileage.
- ▀ High-strength synthetic fibre construction and multi-radius profile - Improved stability, progressive cornering transitions and increased load-carrying capability.
- ▀ 70/30 tread pattern with optimised tread blocks - Balanced performance on both paved and unpaved surfaces, ensuring predictable behaviour across a wide range of riding conditions.
- ▀ Optimised groove layout - Efficient water evacuation and self-cleaning capability from mud and debris.

## SIZES

| RIM | SIZES                  | POSITION |
|-----|------------------------|----------|
| 17  | 150/70 R 17 69V TL M+S | REAR     |
|     | 170/60 R 17 72V TL M+S | REAR     |
| 18  | 150/70 R 18 70V TL M+S | REAR     |
| 19  | 100/90 - 19 57V TL M+S | FRONT    |
|     | 110/80 R 19 59V TL M+S | FRONT    |
|     | 120/70 R 19 60V TL M+S | FRONT    |
| 21  | 90/90 - 21 54V TL M+S  | FRONT    |
