

LOCATION

3,000 km through Catalonia on wet city streets, mountain roads, and light off-road terrain.

TEST VEHICLE

BMW R1250 GS

PERIOD

April/May 2025

THE TEST

Manuel Kaizen conducted an in-depth test of the Eurogrip Trailhound STR tyres for *MotoTaller*, riding a *BMW R1250GS* over approximately 3,000 km.

The evaluation covered a wide range of terrains and conditions — from rain-soaked city streets in Barcelona to twisty mountain roads and light off-road trails.

The objective: to deliver a thorough and realistic assessment of the tyres' performance in diverse real-world scenarios.

KEY RESULTS

- ⇒ **WET WEATHER RELIABILITY:** Delivered excellent performance and grip from the very first kilometres ridden in rainy Barcelona conditions.
- ⇒ **CORNERING GRIP AND STABILITY:** Provided strong confidence and precise handling on both dry and damp roads, even through challenging curves.
- ⇒ **LIGHT OFF-ROAD CAPABILITY:** Surprisingly effective on gravel roads and mild off-road trails, despite their predominantly road-focused design (90/10).
- ⇒ **BALANCED DURABILITY AND GRIP:** The *Quadrazone* multi-compound technology ensures long-lasting central tread wear combined with enhanced lateral grip when cornering.

QUOTES

"The truth is that off-road, for not being a knobby tire, it defends itself surprisingly well on light trails."

"In terms of safety and the confidence it instills, honestly, it's a perfect 10 out of 10."

"Even in wet conditions, they demonstrate absolute reliability, providing a secure feeling."

"They performed exceptionally well, without any strange behavior or unexpected slides, maintaining composure throughout the ride."

"If you didn't see the brand name, you could easily confuse them with tyres from much better-known and established brands due to their quality appearance."

ABOUT TRAILHOUND STR

FOLLOW THE TRAIL AND MAKE IT YOUR OWN – A 90/10 road/trail tyre built for long-distance asphalt travel with the freedom to venture confidently onto gravel and dirt.

MAIN FEATURES:

- Radial structure with 0° steel belt – Ensures responsive handling and consistent control across speed ranges
- Quadrazone multicomponent technology on selected rear sizes – Distinct compound zones for optimized grip, mileage, and cornering stability
- High Silica Compound – Enhances traction and flexibility in cold or wet road conditions
- Adaptive tread design – Engineered for balanced on-road wear and confident traction on unpaved surfaces
- Profile and casing optimization – Improves rider feedback, line precision and overall comfort on varied terrain
